Research Assistantships, Scholarships and Internships

There are several areas you can look for funding as a master student or a PhD student. To see if a research assistantship is available in your field...

Discuss your research interests and publications you have done with the professors who work in your area of research. Please see our website to determine who you should contact. They may have a research assistantship available.

Below is a link to our professors’ information.

http://www2.binghamton.edu/watson/programs/academic-departments/electrical-and-computer-engineering/people/faculty.html

There are professors’ research videos with details at this location:

http://www2.binghamton.edu/watson/programs/academic-departments/electrical-and-computer-engineering/research/research-projects.html

If you see a research area you are working in, e-mail that professor telling them what you have worked with in that field, your accomplishments, and publications and let them know you are interested in working with them. It is helpful to let the professor know what you hope to learn by continued research in the field in which you and that professor share an interest.

Information about other funding opportunities (scholarships, fellowships, etc.) is here:
